

Benjamin Levin

Lead Software Engineer | Java / Spring Boot | Kubernetes | AI-Assisted Engineering

benlevin0213@gmail.com | Haifa, Israel | linkedin.com/in/benjaminlevin | github.com/benjamin-levin

PROFESSIONAL SUMMARY

Lead Software Engineer and hands-on team lead, combining Java/Spring backend engineering with technical leadership; 19+ years across enterprise telecom OSS/BSS, automotive, and mobile platforms. Ran a distributed team of up to **11 developers** in Europe and India, owning technical design, code review, and production support and delivering production systems for major telecom operators including Telenet, Telefónica/O2, GCI Alaska, GTD Chile, and Rakuten.

Improved response times by **30-88%**, brought incoming Order Capture defects down **~75% over two years**, and introduced AI-assisted development and an MCP- and RAG-grounded agent that took average defect-triage time from **~2 hours to ~30 minutes**.

CORE COMPETENCIES & TECHNICAL SKILLS

Technical Leadership & Delivery: Engineering Leadership, System Design, SOLID Principles, Code Review, Distributed Systems, Team Mentoring, Agile/Scrum, Sprint Planning, Story Mapping, L3 Production Support

Backend: Java, Spring Boot 3, Spring Framework 6, Spring Cloud, JPA, Quarkus, Tomcat, Node.js, REST, SOAP, GraphQL, Microservices, Go, C#, ASP.NET

Messaging & Data: Elasticsearch, PostgreSQL, RabbitMQ, Redis, Kafka, Cassandra, MySQL, SQL, NoSQL

Cloud & DevOps: Docker, Kubernetes, OpenShift, GCP, AWS (S3, EC2), Azure, Oracle Cloud, Linux, Git, CI/CD, Jenkins, Prometheus, Grafana, monitoring, logging, telemetry

Frontend & Mobile: Angular, JavaScript, TypeScript, jQuery, HTML5, CSS3, Bootstrap, PHP, Android

AI-Assisted Engineering: MCP agent tooling, RAG-grounded agents, AI-assisted defect triage, repository-aware code analysis, LLM prompt and agent-skill engineering, Claude Code, Cursor, Claude Sonnet, Gemini, OpenAI GPT

PROFESSIONAL EXPERIENCE

Netcracker Technology

July 2015 - September 2026

Lead Software Engineer (July 2017 - September 2026)

Senior Software Engineer (July 2015 - July 2017)

- Led a **distributed engineering team of up to 11 developers across Europe and India while remaining hands-on**, delivering concurrent customer releases and Level-3 production support while owning technical quality and critical incident resolution.
- Built a **5-engineer Pune engineering pod in three months**, selecting the team from 70+ interviews and accelerating technical ramp-up through two multi-month on-site architecture and knowledge-transfer engagements.
- Reduced **response times by 30-88% across critical enterprise order-entry workflows**, accelerating key flows from **~4s to ~0.5s**, by eliminating redundant service calls, introducing targeted caching, and tuning SQL and application hot paths.
- Owned **technical design, feature development, and scaling across enterprise telecom OSS/BSS platforms**, spanning order entry, CPQ, product catalog, validation, and Kubernetes-based delivery streams.
- Decreased **incoming defect volume for the Order Capture component by ~75% over two years** by identifying and eliminating recurring root causes, strengthening code reviews and CI validation, and improving engineering quality before changes reached customer environments.
- Shortened **average defect-triage time from ~2 hours to ~30 minutes** by operationalising a Claude Sonnet-based ticket-assessment agent for Order Capture – authored its domain skill, grounding each assessment through MCP tools (Jira, GitLab, Jenkins) and RAG retrieval over product documentation and prior tickets for evidence-cited root-cause and fix suggestions.
- Scaled **AI-assisted development across Java/Spring and Angular teams**, introducing repository-aware workflows for implementation, refactoring, code analysis, and test generation and **cutting unit-test creation time by ~40%**.
- Served as a **hands-on technical owner across multi-release OSS/BSS delivery for 30+ telecom customer programs**, including Charter Communications, resolving architecture, integration, performance, security, backport, and production-release issues across enterprise order-entry platforms.

Symphony Teleca Corporation (now Harman)

February 2011 - July 2015

Principal Software Engineer

- Samsung Messaging – Suwon, South Korea:** Selected for an on-site engagement at Samsung HQ to optimise and customise core messaging infrastructure for flagship Android devices.
- SiriusXM Connected Vehicle Platform:** Engineered the Java server-side architecture and Android client for a vehicle infotainment platform demonstrated live at CES 2012.
- Android UI & Widgets – Nokia, Savelli:** Developed low-level Android UI adaptations replicating native Nokia experiences, and built weather/alert widgets focused on responsiveness, asynchronous loading, and low power consumption.

Onlyoffice

November 2009 - January 2011

Software Engineer

- Designed and implemented operational subsystems in C# and ASP.NET for TeamLab, now Onlyoffice, an enterprise collaboration and document management platform.
- Delivered modules for bookmark systems, corporate planners/organisers, project templates, real-time analytics aggregators, and automated bulk LDAP/employee data ingestion pipelines.

MERA NN

November 2006 - November 2009

Software Engineer

- Built high-availability web applications for operating, remotely administering, and monitoring Nortel ICP communication infrastructure.
- Authored architecture specifications and deployment plans; maintained JUnit/Cobertura test suites to raise coverage and reliability.

PERSONAL PROJECTS

ikite.fyi

2023 - Present | Personal project

Israeli Mediterranean wind monitoring platform for kitesurfing/windsurfing

- Designed, built, and operate a production wind-monitoring web app hosted on Oracle Cloud (OCI), covering live multi-station wind readings, time-series charts, beach cameras, and a secured admin settings page; originally built in PHP (2023) and fully rewritten in Go in 2026.
- Implemented scheduled collectors that poll Windguru and local Israeli station feeds, persist data in MySQL, and send Telegram wind-threshold alerts; own end-to-end delivery, from schema migrations and Docker-based setup to systemd timers/cron and production hosting at <https://ikite.fyi>.

EDUCATION & ACADEMIC TRAINING

N. I. Lobachevsky State University of Nizhny Novgorod

2003 - 2008

Master's, Faculty of Computational Mathematics and Cybernetics – Graduated with Honours

Nortel Networks (New York, USA)

March 2009 - June 2009

Advanced Corporate Training: Common OA&M Architecture

LANGUAGES

- **English:** Fluent - 19+ years of daily professional use in international engineering teams, technical leadership, documentation, code review, and customer-facing delivery
- **Hebrew:** Upper-intermediate – professional working proficiency
- **Russian:** Native
